

September 8, 2010 Procurement Subcommittee summary

- I. Specifications: Draft specifications were reviewed for solar thermal panels and low-flow showerheads. Several suggestions were made for additional edits. These edits will be made and the specifications will be revisited before a final draft is submitted to the Interagency Committee for review.

- II. Review of Advisory Council Recommendation on Chemicals
 - a. Since the previous meeting, OGS and DEC each made further edits to the draft document pertaining to the recommendation. The subcommittee reviewed both drafts and incorporated the agreed-upon changes into a single document.
 - b. Members considered a draft recommendation that includes references to the EPA Waste Minimization Priority List; the National Toxicology Program 11th Report on Carcinogens, List of Chemicals Known and Reasonably Anticipated to be Human Carcinogens; and those chemicals EPA has identified in its Action Plans under the Toxic Substances Control Act. The recommendation does not incorporate a list of chemicals, but refers to these lists as sources that will continue to inform the development of specifications and the evaluation of existing standards and certification programs.
 - c. The draft would be circulated following the meeting for further review and comment by the subcommittee members.
