Digital Accessibility and Usability Testing and Remediation Reporting Services (DAUTRRS)
September 7, 2018

* DAUTRRS is the evaluation of a customer's digital platforms, websites, mobile applications, software programs, PDFs, and other digital documents to ensure compliance with accessibility and usability regulations and standards to allow people who are blind, visually impaired, or print disabled to enjoy barrier-free use of, and access to, digitized communications and information. This service may include digital assessment, testing, and reporting of recommended remediation, as well as knowledge transfer but does not include implementation of the recommended remediation by the Preferred Source. DAUTRRS evaluations will reference the applicable regulations, standards, and policies against which the customer's media is tested, as set forth by federal, State, and local governments as well as the customer, such as Section 508 of the Rehabilitation Act of 1973, NYS Information Technology Policy, etc.
